# National Assessment of the Participation of Women and Girls in the National STI System Based on the Gender Equality-Knowledge Society Framework 

## INDIA REPORT

Sudha Nair India

## Contents

## Introduction

## Part 1 Knowledge Society Inputs: Women's Potential for Participation

## 1. Health Status

1.1 Female Healthy Life Expectancy.
1.2 Notified Malaria Patients by Sex .
1.3 Notified Tuberculosis Patients by Sex.
1.4 Prevalence of Rates of HIV/AIDS.
1.5 Physical Integrity (FGM)
2. Social Status
2.1 Equity/Discrimination in Social Institution
2.2 Sex Ratio at Birth.
2.3 Domestic violence
2.4 Sexual Violence
2.5 Time Use.
3. Economic Status
3.1 Women as \% of Economically Active Population.
3.2 Earned Income Ratios
3.3 Females by Category of Workers
3.4 Share of Women in Poorest Quintile

## 4. Access to Resource

4.1 Ownership Rights to Land, Houses and Other Property
4.2 Women's Access to Credit, Loans, Venture Capital
4.3 Percent of Women Using Internet and Cell Phones.
4.4 Use by Women of Railroads and Other Transportation Infrastructure.
5. Women's Agency
5.1 Share of Women in Lower House of Parliaments
5.2 Shares of Women Ministers and Sub-Ministers
5.3 Women in Senior Positions in Political Parties, Trade Unions, Employers Associations, Professional Organization, NGOs and Community Based Associations.
5.4 Contraceptive Use
6. Opportunity and Capability
6.1 Men's/Women's Adult Literacy Rates
6.2 Net Primary, Secondary and Tertiary Enrolments.
6.3 Availability of On-the-Job, Staff, Specialized Training for Women and Men
7. Enabling Policy Environment
7.1 Inclusion of Gender Issues in the National Knowledge Society Policies on Science and

Technology, ICT, Labor and Education
7.2 Existence of Gender-Specific Policies on Childcare, Equal Pay, Flexible Work and Transport for Women
7.3 Ratification to CEDAW
7.4 State Budget Allocations to Benefit Women in the Unstructured Economic Sector.
7.5 Institutionalization of Inter-Ministerial Relations on Gender

## Part 2 Knowledge Society Outcomes:

## Indicators of Women's Participation in the Knowledge Society

## 1. Women in Knowledge Society Decision Making

1.1 Share of Women as Legislators, Senior Officials \& Managers .
1.2 Share of Businesses with 35 per cent or More Women in Decision Making Positions.
2. Women in Knowledge Economy
2. 1 Share of Women in Professionals and Technical Positions
2.2 Shares of Women in Administrative and Managerial Positions
2.3 Employment by Economic Activity (occupation and status) in Agriculture, Industry and Services in KS Area
2.4 Women with High Level Computer Skills.
2.5 Share of Women among Information Technology Workers

## 3. Women in S\&T and Innovation System

3.1 Shares of Women Studying Science and Engineering at Tertiary Level.
3.2 Shares of Women Scientists and Engineers $\qquad$
3.3 Shares of Women Researchers
3.4 Comparative Rates and Trends of Publication
3.5 Gender Trends in Brain Drain in Highly Skilled Fields
3.6 Number of Women-Run Enterprises in Sector Value Chains
3.7 Women's Early Stage Entrepreneurial Activity
4. Women and Lifelong Learning
4.1 Women as Users of (village) Knowledge Centers.
4.2 Women as Managers of (village) Knowledge Centers

## Introduction

> The Eleventh Five Year Plan document for the first time in the history of Indian planning recognizes women not only as equal citizens but as 'agents of sustained socio-economic growth and change' (Gol, 2008, p. 5)'.

The Census $2011^{2}$ results reveal that the population of India is at $1,21,01,93,422$ and growing fast, with the male composition at $62,37,24,248$ and females at $58,64,69,174$ (Table 1). A growth rate of 17.64 (\%) over the current decade has declined compared to the previous two decades - the sharpest decrease since India's independence: male population growth is 17.19 per cent and female is 18.12 per cent, with an overall sex ratio of 940 . India is ranked 119 among 192 countries on the UNDP Human Development Index, moving one notch higher since 2005, with a medium level of HDI of 0.52 . The IHDR states that the HDI (currently at 0.547 ) has increased by 21 per cent between 1999-2000 and 2007-08 ${ }^{3}$. However, its ranking on the Gender Diversity Index is less positive, situated in the lowest ranking group of the Asia Pacific region. As the deadline is fast approaching for achievement of the MDG targets, like many other countries India finds itself in a mix of successes and failures. Advances are clear where targeted interventions have been initiated with appropriate investments and better institutional mechanisms. This is evident in the vast improvement in the Education Index (on track as far as the MDG target is concerned) and a moderate improvement in the Health Index (albeit falling short of the MDG target) ${ }^{4}$.

As a youthful nation, India has great potential to benefit from its demographic dividend. The labour force in India is expected to increase by 32 per cent over the next twenty years ${ }^{5}$. This can be achieved if the nation invests more in the key areas of health, education and skills development. Also, it needs to enhance good quality employment and livelihood opportunities for youth, both males and females. Given that India is at the bottom of the Gender Diversity Index in the Asia Pacific region ${ }^{6}$, it needs to adopt proactive interventions to enhance the participation of women more efficiently and effectively - a target where it is still off track in spite of the fact that the country has had an enabling policy framework in place right from the time of its independence ${ }^{4}$.

[^0]Some of the current global gender indices for the country are given as follows: the Gender Inequality value is $0.617^{7}$; the Gender Equity ranking by Social Watch (education, economic ability and empowerment) was 41 in $2009^{8}$; the Women's Economic Opportunity index, a new report from the Economist Intelligence Unit, gives an overall score of $42.7^{9}$ (84/113); the OCED Social Institutions and Gender Index value is $0.38112^{10}$; and India's Global Gender Gap value is $0.619^{11}$. The HDI and Gender Gap components are presented in Table 2.

Table 1 Population of India, 1951-2011

| Year | Male | As \% | Female | As \% | Person |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1951 | $185,528,462$ | 0.51380 | $175,559,628$ | 0.486196 | $361,088,090$ |
| 1961 | $226,293,201$ | 0.51520 | $212,941,570$ | 0.484801 | $439,234,771$ |
| 1971 | $284,049,276$ | 0.51819 | $264,110,376$ | 0.481813 | $548,159,652$ |
| 1981 | $353,374,460$ | 0.51714 | $329,954,637$ | 0.482863 | $683,329,097$ |
| 1991 | $439,358,440$ | 0.51908 | $407,062,599$ | 0.480922 | $846,421,039$ |
| 2001 | $532,223,090$ | 0.51736 | $496,514,346$ | 0.482644 | $1,028,737,436$ |
| 2011 | $623,724,248$ | 0.51539 | $586,469,174$ | 0.484608 | $1,210,193,422$ |

## Methodology

The Ministry of Statistics and Programme Implementation (MOSPI) of the Government of India is the point from which data sets are available from key surveys ${ }^{12}$. It provides data from the Census, surveys conducted by the National Sample Survey Organization ${ }^{13}$, and the National Family Health Surveys ${ }^{14}$. The Indian Census is the most credible source of information on Demography (Population characteristics), Economic Activity, Literacy and Education, Housing \& Household Amenities, Urbanisation, Fertility and Mortality, Scheduled Castes and Scheduled Tribes, Language, Religion, Migration, Disability and many other socio-cultural and demographic data since 1872. The National Sample Survey Organisation or NSSO - now the National Sample Survey Office - is an organization in the Ministry of Statistics and Programme Implementation of the Government of India. It is the largest organisation in India conducting regular socio-economic surveys. The National Family Health Survey (NFHS) is a large-scale, multi-round survey conducted in a representative sample of households throughout India. Three rounds of the survey have been conducted since the first survey in 1992-93. The survey provides state and national information for India on fertility, infant and child mortality, the practice of family planning, maternal and child health, reproductive health, nutrition, anaemia, utilization and quality of health and family planning services.

Census 2011 was the 15th National Census of the Country and the results are under process. Conceptually the National Census has been gender neutral and data collected separately for men and women. The 2011 Census was historic in that gender was integrated into the entire process and it is expected that the survey results will lead to the availability of better disaggregated data on various indicators in the year ahead. The Central Statistics Office in MOSPI has also produced a publication on crucial statistical indicators of socio-economic relevance since 1995 entitled 'women and men" series at time intervals. The 2010 series has updated data for certain indicators up to 2009.

Sources of data collection for this report are MOSPI, the official portal for the Government of India, the series report on women and men 2010, the mid-term appraisal document of the $11^{\text {th }}$ Five Year Plan of the Government of India, the MDG progress reports for 2009 and 2010, and the draft $12^{\text {th }}$ Five Year Plan of the Government of India. Other sources include international agencies, the annual reports of various ministries, publications and articles. Data was collected and analysed according to the components of the Gender Equality - Knowledge Society framework and includes mostly quantitative data from the national and international data sets matching the framework requirements. Some additional data has also been provided for better understanding of the context at the country level.

[^2]The report has two major sections: the first captures the sub sectors of health, social status, economic status, access, agency and opportunity and capability. The sub-sector on enabling policy environment and the main polices and schemes which have direct relevance to the indicators chosen are presented in the relevant sub-sections. Also provided in the glossary are the definitions for the indicators.

This study makes evident that there are many data gaps, highlighting the need to measure newer indices, as well as the need for better disaggregated data which is better organized for access and analysis. The report will definitely mark a beginning in the way we measure the participation of women in the knowledge society.

Part 1 Knowledge Society Inputs: Women's Potential for Participation

## 1. Health Status

Over the last decade India has seen improvement in various health outcomes - death rate, infant mortality rate (IMR) and under five mortality rate (U5MR) - as well as declining fertility rates. These along with other medical advances have increased life expectancy in the country. India performs better than Sub-Saharan Africa and South Asia in terms of child mortality and healthcare for mothers. Human resources in the health and family sector have been growing at a very slow rate. The number of doctors per one lakh population has gone up from 56 in 2001 to 69 in 2010. Similarly, the number of nurses per one lakh population has increased from 78 in 2001 to 144 in 2008. The institutional infrastructure including hospitals, dispensaries and public health centres which numbered 15,396, 22,638 , and 22,842 respectively in 2001 has expanded to 22,558 dispensaries in $2008,12,760$ hospitals and 23,391 public health centres in 2009. The per capita expenditure by government of Rs 171 in 2000-01 was increased to Rs 336 in 2007-08 ${ }^{3 / 18}$. Despite a commendable increase in human resources brought about by the National Health Mission, there is much to be covered. With the national expenditure on health care at 4.1 per cent of GDP in 2007, the improvement in the health index during the period 1999-2000 to 2007-8 was only 13 per cent ${ }^{3}$. With enhanced efforts, telemedicine and rural telephony could help to bring specialised health care to the remotest corners of the country to help meet the 2015 MDG targets.

### 1.1 Female Healthy Life Expectancy

There are no available data at the national level on female healthy life expectancy. World Health Organization statistics are provided for the years 2002 and 2007 in Table 1.1.

Table 1.1 Healthy life expectancy 2002 and 2007

| Indicator | $\mathbf{2 0 0 2}$ | $\mathbf{2 0 0 7}$ |
| :--- | :--- | :--- |
| Health Life Expectancy - both sexes | 53.2 | 56 |
| Health Life Expectancy - Male | 53.3 | 56 |
| Health Life Expectancy-Female | 53.6 | 57 |

Source: http://www.who.int/whosis/whostat/EN_WHS10_Full.pdf

Life expectancy at birth (LEB) has increased more among women than men over the period 1981-85 to 2004, especially for females. As a result, the gender gap in life expectancy has also increased over the period 1992-6 to 2004. During the period 2002-06, LEB for males was 62.6 years compared to 64.2 years for females. Rural areas also saw an increase, reducing the rural-urban gap ${ }^{15}$. Data from the international data set are given for the year 2008-09 in Table 1.2 and the national data trends in Table 1.3.

[^3]Table 1.2 Life expectancy at birth

| $2001-05$ | 63.9 | 63.3 | 63.6 |
| $2002-06$ | 64.2 | 62.6 | 63.4 |

Source : http://mospi.nic.in/Mospi_New/upload/w_and_m_2010.htm

The total fertility tate - TFR (Table 1. 4) declined over the period 1980-2008, reaching 2.9 in 2008 in rural areas and 2.0 in urban areas. The Midterm Appraisal of the $11^{\text {th }}$ Five Year Plan also showed optimism on this front ${ }^{1}$. TFR linked to rising education of people has been captured in Table 1.5. The last decade has witnessed a dramatic fall in IMR in both rural (74 in 2000 to 55 in 2009) as well as urban areas (44 in 2000 to 34 in 2009) and by sex ${ }^{3 / 16}$.

[^4]1.4 Total fertility rate

| Year | Total Fertility Rate (TFR) |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Rural | Urban | Combined |  |
| 2000 | 3.5 | 2.3 | 3.2 |  |
| 2001 | 3.4 | 2.3 | 3.1 |  |

The place of delivery is very important in determining maternal health and IMR. Skilled birth attendance at deliveries has increased from 33 per cent in 1992-93 to 52 per cent in 2007-2008. The rural-urban gap in coverage by skilled birth attendants in 2005-06 was 36 per cent. By 2015 India can expect only 62 per cent deliveries to be attended by skilled personnel (Table 1.6). The rate of increase in institutional deliveries is slow, from 26 per cent in 1992-93 to 47 per cent in 2007-08 (Table 1.7). However, projected improvements in access to institutional delivery have been greatly accelerated with the introduction of the Janini Suraksha Yojna ${ }^{17}$ as part of the National Rural health Mission (NRHM) ${ }^{18}$, which aims at reducing maternal and neonatal mortality by increasing institutional deliveries for BPL families. As of March 2009, institutional deliveries stood at 78 per cent. The national MMR has come down from 398 per 100,000 live births in 1997-98 to 254 per 100,000 live
births in 2004-06. This is a 36 per cent decline over seven years as compared to a 25 per cent decline in the preceding eight years from (1990-1997) and a 32 point decline to 212 during 2007-09 (Table 1.8). India will tend to fall short of the target to reach a MMR of 109 per 100,000 live births by 2015 by about 26 points, with a more likely projection to reach a MMR of about 135 per 100,000 live births by that date ${ }^{16}$. The U5MR decreased from 125 per thousand live births in 1990 to 74.6 per thousand live births in 2005-06 and is expected to reach a level of 70 by 2015, as against a target of 42 per thousand live births by 2015. Accelerating reduction in the incidence of neo-natal deaths (66 per cent of IMR in 2007) alone can contribute substantially towards achieving U5MR and IMR targets.

Table 1.6 Proportion of deliveries attended by skilled personnel (\%)

### 1.2 Prevalence of Malaria

The incidence rates of malaria and death associated with malaria are on the decline: the rate among the people who were examined for the disease was 1.67 per cent in 2006 and was down to 1.51 per cent by $2009^{4}$.

### 1.3 Prevalence of Tuberculosis

Success rates for tuberculosis detection and cure are continuing at high levels. The decline in the prevalence and mortality rates as presented by WHO estimates for India show a drop in prevalence of 89 per 100,000 from 1990 to 2009 and a drop of 20 per 100,000 in mortality over the same period. The national prevalence rate based on registered cases alone shows a drop of 93 per 100,000 between 2004 and 2010, from 125.4 per 100,000 to 32.6 per 100,000, where disaggregated data are available ${ }^{4}$.

### 1.4 Prevalence of HIVIAIDS

It is reported that 23.95 lakh people were living with HIV/AIDS in 2008-09 - of which 38.7 per cent were female - but the prevalence is dropping ${ }^{4}$. The prevalence among ANCs is captured in Table 1.11, by age and place in Table 1.12, and by education and wealth in Table 1.13. The percentage incidence of HIV/AIDS cases among all types of high risk people observed at sentinel sites across the country declined discernibly over the last five years. Estimated adult prevalence has come down to 0.31 per cent in 2009 from about 0.34 per cent in 2007 and 0.45 per cent in 2002. Among pregnant women of 15-24 years, the prevalence has declined from 0.86 per cent in 2004 to 0.49 per cent in 2007. A drop by more than 50 per cent has been recorded among pregnant women aged 25-49 years as well: from 1.09 per cent in 2004 to 0.52 per cent in 2007. The total number of females living with HIVIAIDS has continued to decline from 1.07 million in 2002 to 0.97 million in 2006 and further to 0.95 million in $2007^{4}$. Laws that protect people living with HIV against discrimination are place, while the National Aids Control Organization ${ }^{19}$ has established Guiding Principles for creating an enabling environment for those with HIV and AIDS, with a focus on women.

The ratios as given in the Global Gender Gap Report $2011^{14}$ are as follows: female HIV prevalence between $15-49$ years is 0.30 , for males it is 0.40 , with the age group $30-34$ being the highest risk group at 0.64 for males and 0.45 for females. The NFHS $3^{9}$ as indicated in the statistics for 2006 gives a figure of 0.40 per cent for males in the age group of $15-49$ and 0.30 for females. UNFPA's State of the World's Population $2011^{20}$ gives a figure of 0.1 per cent each for both males and females concerning HIVIAIDS prevalence in the age group 15-24 in 2009. The percentage of those who have a comprehensive knowledge of HIVIAIDS is 36 per cent for males and 20 per cent for females for the year 2008. Disaggregated data are not provided for other years.

### 1.5 Physical Integrity

India has no custom of female genital mutilation.

Some relevant policy/schemes: National Health Policy $2002^{21}$; Natl Rural Health Mission (NRHM) ${ }^{22}$, draft National Food Security Bill ${ }^{23}$; National Nutrition Policy $1993^{24}$; Antyodaya Anna Yojana ${ }^{25}$;

Annapurna Scheme (Implemented by Ministry of Rural Development); Conditional Maternity Benefit Scheme ${ }^{26}$; Family Counselling Centres (FCC) ${ }^{27}$, Reproductive and Child Health Programme (Maternal Health and Child Health) ${ }^{28}$; Janani Suraksha Yojana (National Maternity Benefit Scheme) ${ }^{17}$ Pradhan Mantri Gramodaya Yojana for Primary Health Sector ${ }^{29}$; Programme to Prevent Anaemia due to Iron Deficiency; Rashtriya Arogya Nidhi (Financial Assistance to BPL Patients) ${ }^{30}$; Rashtriya Swasthya Bima Yojana (RSBY) ${ }^{31}$, National AIDS Control; National Diseases Control Programmes (TB, leprosy, malaria, etc); Total Sanitation Programme etc.

## 2. Social Status

The Constitution of India ${ }^{33}$ guarantees equality to all Indian women, no discrimination by the State; equality of opportunity and equal pay for equal work. It also states to favour women and children, renounces practices derogatory to the dignity of women and commits to provide just conditions of work and maternity relief. Details are provided in the section on enabling policy environment.

### 2.1 Equity/Discrimination in Social Institutions

Measures in terms of social equity are presented in Table 2.1.

Table 2.1. Social Institutions and Gender Index and subindexes

### 2.2 Sex ratio at birth

The sex ratio is indicative of the composition of the population and is defined as the number of females per 1,000 males. The male to female ratio is 1.063 according to the 2011 census (Table 2.2), showing that a female deficit prevails despite an improvement over time. India has had a female deficit for a long time, which improved slightly between 2001 and 2011 from 933 to $940^{3}$. The national SR (females to 1000 males) is 936, in rural areas it is 947 and urban areas 909 in 2009-10 (Table 2.3). Selective abortion continues to be practiced and preference for the male child continues (Table 2.4).

Table 2.2. Male-female ratio of Indian population over the years by residence and combined 1901-2011

| Year | Rural | Urban | Combined |
| :--- | :--- | :--- | :--- |

Autonomy in decision making is still a gap area - social attitudes are strongly influenced by traditional cultural systems and disadvantages for women continue, as demonstrated in Table 2.5. In the age group 15-19, 46 per cent of females are not involved in any kind of decision making. In rural areas, 23.4 per cent of females are not involved in any decision-making, while in urban areas only 13.9 per cent of resident women are not involved in any decision making. 32.7 per cent of illiterate women and 21.6 per cent of employed women are not involved in any decision making ${ }^{15}$.

### 2.3 Prevalence of Violence against Women

The National Policy for Empowerment ${ }^{34}$ of Women recognises violence against women as a critical area of concern and recognises measures to: prevent and eliminate violence; study the causes and consequences of violence; eliminate trafficking in women; and assist victims of prostitution and trafficking. It also recognizes the need for guidelines to establish District Level Committees on Violence against Women and helplines for women in distress. A national level Committee has also been set up to monitor the Supreme Court's guidelines on prevention of sexual harassment of women at the workplace. A National Resource Centre for Women (NRCW) portal has been set up to inform and empower women, and lodge complaints of women's rights violations on-line. ${ }^{35}$ Progressive legislation on Domestic Violence was enacted in 2005, ${ }^{36}$ but much needs to be covered. Total and type of crimes against women are captured in Table 2.7.

Source: The full text of Crime in India 2010 report is available at: http://ncrb.nic.in/

Registered crimes have come down in recent years in some areas, yet overall numbers seem to be on the rise. Systems in place to address crime include police action, while many states have put women's police stations in place and specific legal measures. NGOs play a role in rehabilitation programmes.

The existence of legislation in India punishing acts of violence against women is rated at 0.33 by Global Gender Report 2011. As stated earlier, India ratified the Convention on Elimination of All Forms of Discrimination against Women (CEDAW) in 1993. The UN Statistics Divison
(Unstats.Un.Org) provides the following data for prevalence of violence against women for 1998/2000: irrespective of perpetrator - 19 per cent and by intimate partner - 10 per cent.

### 2.4 Time use

According to the Pilot time use survey conducted in 1998 (for which data are presented in the women and men series $2010^{15}$ ), women work longer hours than men and carry the major share of household and community work that is unpaid and invisible. The results also show an average work week of about 42 hours in SNA for males as compared to only for 19 for females. Males spend only about 3.6 hours on household and care related activities, as compared to 34.6 hrs by females - ten times more. Women spend about 2.1 hours per day on preparing food and about 1.1 hours on cleaning the household and utensils. Men's participation in these activities is nominal. Taking care of children is one of the major responsibilities of women, as they spend about 3.16 hours per week on these activities as compared to 0.32 hours by males. In the non SNA activities which pertain to learning, leisure and personal care, male spend 8 hours more than females on average. Men and women spend on average 1 hour on talking and 1 hour on meditation. The results of the 2011 Census are awaited; data from the year 2000 is in Table 2.8 below.

The time contribution of women in agriculture activities is 32 per cent on average in India, while younger women contribute more than older women (FAO, 'The Role of Women in Agriculture'). ${ }^{37}$

### 2.8. Time use

Policy/Schemes:
The Pre-natal Diagnostic Techniques (Regulation and Prevention of Misuse) Act, 1994, The Medical Termination of Pregnancy Act, 1971. Child Marriage Restraint Act, 1929 (Amended in 1979, 2006 \& 2008). Child Labour (Regulation and Prohibition) Act, 1986 (amended in 2006). Infant Milk Substitutes, Feeding Bottles and Infant Food (Regulation of Production, Supply and Distribution) Act, 1992. Indian Penal Code (IPC 376 rape, 302/304B kidnapping and abduction, 498A torture both mental and physical, 354 molestation, 509 sexual harassment); The Protection of Women from Domestic Violence Act 2005; The Prohibition of Child Marriage Act, 2006; Prevention of Sexual Harassment Bill; Indecent Representation of Women (Prohibition) Act, 1986; Commission of Sati (Prevention) Act, 1987; The Family Courts Act, 1954; Immoral Traffic (Prevention) Act, 1956; Dowry Prohibition Act, 1961, etc.

## 3. Economic Status

The National Sample Survey Organisation's (NSSO) latest survey ( $66^{\text {th }}$ round) in 2010 on employment and unemployment shows a significant slow down in job creation between 2004-05 and 2009-10. Although the country's real GDP growth averaged a robust 8.6 per cent per annum, the total employment growth was only 0.8 per cent per annum over this period, dropping from an annual 2.7 per cent in the previous five year period. The UN World's Women 2010 gives the following data for adult labour force participation for females in 1990 as 35 per cent and in 2010 as 34 per cent. For men it is 85 per cent in 1990 and 81 per cent in 2010. Women's share of the adult labour force in 2010 is 29 per cent. The ILO data set for labour force participation is provided in Table 3.1.

Source: Labour Stat -kilm.ilo.org

As per the NSSO 66th survey and the Mid Term Appraisal of the $11^{\text {th }}$ Five Year Plan, many young individuals previously employed in menial jobs have returned to school. This is evident from increased school attendance and a decline in child labour. The participation of women in the labour force has also declined sharply because of an improvement in other socio-economic indicators (eg: spending more time in school). Labour force participation by education/place and sex is presented in Table 3.2.

Table 3.2 Labour force participation rates by education and sex - India (\%)

| Year | Educational Level | Rural |  | Urban |  |
| :--- | :--- | :--- | :--- | :--- | :---: |

Source: http://mospi.nic.in/Mospi_New/upload/w_and_m_2010.htm

It is seen that the labour participation rate for women dropped much more over this period, from 29.4 per cent to 23.3 per cent. The proportion of female labour in the total population decreased from 215 per 1,000 in 2005 to 179 per 1,000 in 2009-10. This appears to be one of the reasons for the lower employment growth between 2004-05 and 2009-10 than earlier. A closer examination of the findings reveal certain positive developments in the economy. The first is that more young people are opting for education, with a substantial increase of both boys and girls opting for education in the recent period. This is as true of the age cohorts 15 to 19 as for 20 to 24 . The percentage of males in the age group 15 to 19 who reported attending educational institutions as their primary activity was 48 per cent in 1999-2000. It increased to 51 per cent in 2004-05 and shot up to 64 per cent in 2009-10. For males in the age group 20-24, the upturn was even sharper: from 14 per cent in 1999-2000 and 15 per cent in 2004-05 to 23 per cent in 2009-10. According to the 66th round, the achievement on this front was even better among women, who returned to school with the hope of better job opportunities. The total number of such youth is now estimated at about 55 million. Naturally, the pace of job creation will have to go up significantly to accommodate the new entrants in the labour force with better qualifications.

The other positive development relates to the significant rise in real wages for both men and women. For salaried women workers in rural areas, salaries increased at 1.7 per cent per year between 19992000 and 2004-05. However, they rose at a whopping 12.8 per cent per annum between 2004-05 and 2009-10. For urban women, they rose from 1.8 per cent per annum to 15.1 per cent over the same period. For men in rural areas, salaries grew by 2.6 per cent annually in the first period and 11.5 per cent in the second period. For women casual workers in rural areas, the annual increase in wage rates went up from 3.5 per cent in the first period to 14.6 per cent in the second period. For urban women who were casual workers, the income growth was 2.8 per cent per year in the first period and 11.8 per cent in the second period. The trend for male workers is similar.

Also according to the latest NSSO survey, 40 per cent of the population belong to the labour force: 41 per cent in rural areas and 36 per cent in urban areas. LFPR is significantly lower for females than for males in both rural and urban areas. It is about 56 per cent for each of rural males and urban males. For females, LFPR is 27 per cent in rural areas and 15 per cent in urban areas (Table 3.3). WPR in is 39 per cent, with rural WPR ( 41 per cent) higher than urban WPR ( 35 per cent). In both rural and urban areas, female WPRs are considerably lower than male WPRs: while male WPR is nearly 55 per cent in rural areas, it is 26 per cent for females; urban male WPR is nearly 54 per cent compared to 14 per cent of urban female WPR (Table 3.4). The UR is nearly 2 per cent with the rate in urban areas higher than that in rural areas ( 3 per cent in urban areas compared to 2 per cent in urban areas). Moreover, in rural areas UR for both male and female is at the same level (nearly 2 per cent) while in urban areas UR for females is double to that of the male UR ( 6 per cent for females compared to 3 per cent for males) (Table 3.5).

### 3.2 Share of women by status of worker

Among the three categories of employment, self-employment in rural areas makes up the dominant share (nearly 54 per cent) of the workforce, while the share of casual labour stands at 39 per cent, while the rest ( 7 percent) of the workforce is made up of regular wage/salaried employees. The trends for female and males in rural and urban areas is captured in Table 3.6.

### 3.3 Earned Income Ratios

The Global Gender Report 2011 states that the female to male labour force participation ratio is 0.4 and estimated earned income (PPP USD), female to male ratio is 0.31 . The female to male ratio for wage equality for similar work (survey) is 0.62 in rural areas and 0.82 in urban areas ${ }^{2}$. Table 3.7 shows a comparison.

Table 3.7 Average daily real wage rate for workers in (Rs.)

### 3.4 Share of Women in Poorest Quintile

The proportion of people below the national poverty line (poverty headcount ratio or PHR) estimated for 1990 was 37.2 per cent. India will need to reduce that rate by half to 18.6 per cent by 2015 to meet the MDG target for poverty reduction. By the year 2004-05, the PHR was down to 27.5 per cent. Going by the rate of change in the last 15 years, the projected PHR in the year 2015 is expected to be just short of the target by about 3.5 percentage points. Data are not available for the share of women in the poorest quintile. ${ }^{1}$ The Ministry of Rural Development runs various programmes to bring women intothe mainstream and to encourage their participation in the process of national development. These programmes have special components for women with separate funding. The various programmes benefiting women are the Sampoorna Gramin Rozgar Yojana (SGRY), the Swarnjawanti

Gram Swarozgar Yojana (SGSY), the Indira Awaas Yojana (IAY). Data on the percentage of women who have benefitted from employment schemes especially in the rural areas is seen below.

Table 3.8 Percentage of women who benefitted from rural livelihood schemes

| Scheme | 2006-07 | 2007-08 | 2008-09 |

## 4. Access to Resources

### 4.1 Ownership Rights to Land, Houses and Other Property

Indian legislation supports financial independence for women to a moderate degree. Several laws guarantee women's access to land and access to property other than land, but these laws are often ignored, as are those pertaining to women's access to bank loans. The World Bank Gender Equality Report 2012 states that 70 to 80 per cent of women in the south have equal access to land, property, and loans and credit. The Global Gender Report 2011 ranks India on ownership rights to land, houses and other property as follows: women's access to land 0.5 , access to bank 0.5 and ownership rights other than land 0.5 , in a rank of 0-1. (See above for the SIGI and sub sector values).

The data available for the year 2005-2006 are presented in Table 4.1.

Table 4.1 Distribution of households, average area of land possessed and average household size by size class of land possessed for each sex of the head of household (rural areas only)

### 4.2 Women's Access to Credit, Loans and Venture Capital:

Financial inclusion consists of the availability of banking services at an affordable cost to disadvantaged and low-income groups. In India the basic concept of financial inclusion is holding a savings or current account with any bank. In reality it includes loans, insurance services and much more. In the first-ever Index of Financial Inclusion, which explored the reach of banking services among 100 countries, India was ranked 50 R. 21 per cent of accounts in commercial banks belonged
to females in 2006, rising to 22.69 in 2008 to 23.91 in 2010.1 Data comparison is given by sex and banks in Tables 4.2 and 4.3.

Table 4.2 Population groupwise of scheduled commercial banks according to broad ownership category as in March 2008

Source: Annual Statements from the Reserve Bank of India

As a result of programmes targetting the poor under the Self Help Group Bank Linkage Programme, the percentage of women who have access to credit has increased from 45 per cent in 1999 to 66 per cent in 2009. Other sources of loans for the resource poor are micro-finance interventions.

Self Help Groups (SHGs), aare organisations of the poor at the grassroots, developed through a process of social mobilisation mostly consisting of women. Group members regularly save money that is placed in a local (generally public sector) bank account. Many studies have shown that this is a creation of a safe avenue for savings (on which interest is earned). The SHG has a set of by-laws devised and agreed by the members themselves. These include rules for monthly savings, lending procedures, periodicity and timing of meetings, penalties for default, etc. Meticulous accounts and records are maintained. The SHG itself functions like a small
bank. The group lends money to its members. After a certain period (six months to a year) of disciplined functioning, it becomes entitled to a loan from the bank where it has an account. The real power of the SBL model lies in the economies of scale created by SHG Federations (comprising 150-200 SHGs each). This is evident, for example, in bulk purchase of inputs (seeds, fertilisers etc) and marketing of outputs (crops, vegetables, milk, NTFPs etc). They can also provide larger loans for housing and health facilities to their members through large service or loan providers. Insurance services including life, health, livestock and weather insurance are also available. Since most SHGs are women's groups, the potential for women's empowerment is huge and a number of studies have tried to assess the impact of microfinance interventions on women's empowerment. There is overwhelming evidence that women-run SHGs are the best managed with women showing much greater sense of responsibility, as well as a commitment to human development objectives such as health and education of their families.

### 4.3 Percent of women using Internet and Cell phones:

India's rank in the Network Readiness Index of The Global Information Technology Report 2010-2011 is 48 . It has the fastest growing telecom network in the world, with high population and development potential. Overall teledensity has increased to 73.97 per cent as of June 30, 2011 while the mobile density rate increased to 71.11 per cent in June 2011. Although trends are available for the growth of the sector as part of national surveys, sex disaggregated data are not available. In 2000, 23 per cent of internet users were women. The total number of female internet users was 115,000 of 500,000 total, of which 20.5 per cent were female professional and technical workers. ${ }^{\text {R1 }}$ Additional data: 225 million women own mobile phones, 60 million use the internet, 50 million use to landlines. ${ }^{\text {R2 }}$

Statistics on Internet usage according to age group and gender indicate that 2/3 of households contain 'multiple' users; 97 per cent are regular users and 79 per cent use the internet daily. 70 per cent of people who know how to use a computer have accessed the Internet; the 19-40 age group constitutes nearly 85 per cent of Internet users; 85 per cent of Internet users are male; 11 per cent of working women use the internet while 6 per cent of non-working women and 2 per cent of housewives do. 46 per cent of Internet users are graduates while 26 per cent are post-graduates. ${ }^{\text {R3 }} \mathrm{A}$ survey by the Internet and Mobile Association of Indian in its report i-cube $2011^{\text {R4 }}$ pegs working women Internet users (women in the age group of 21-58 years and employed outside home) at 7 per cent and non-working women at 8 per cent (women in the age group of 25-38 years of age and not working - this segment includes housewives as well as non-working young women who are not school or college going students).

### 4.4 Use by Women of Railroads and Other Transportation Infrastructure

No data on use by women of railroads and other transportation infrastructure is available as part of the national survey. Proactive measures include installing female guards in trains; reserving seats for women; and running ladies' special buses, but these measures are not proportionate to the need.

### 4.5 Access to Electricity by Women and Penetration in Rural Areas

Electricity for domestic use in 2008-9 increased to 75 per cent from 64 per cent in 2002, with 96 per cent coverage in urban areas and 66 per cent in rural areas ${ }^{3}$. The total electrification rate was 64.5 per cent - urban 93.1 per cent and rural 52.5 per cent. No disaggregated data are available.

According to the World's Women 2010 the proportion of households using solid fuels for cooking is 31 per cent in urban areas and 90 per cent in rural areas.

## 5. Women's Agency

### 5.1 Share of Women in Lower and Upper Houses of Parliament

The Global Gender Report 2011 rates the female to male ratio of representation in Parliament at 0.12; the ratio of female to male ministers as 0.11 ; and numbers of years with a female head of state in the last 50 years, 0.56 . The percentages of females in the Lower House is 11 per cent $(59 / 545)$ with 10.3 per cent in the Upper House (25/242) (see Table 5.1). The representation of women in the council of ministers is shown in Table 5.2.

The percentage of women in the Panchayat Raj (Rule of Village Committee) is 36.8 per cent. The PRI system is a three-tier system in the state with elected bodies at the Village, Taluk and District levels. It ensures greater participation of people and more effective implementation of rural development programmes. There will be a Grama Panchayat for a village or group of villages, a Taluk level and the Zilla Panchayat at the district level. The Constitutional (73rd Amendment) Act, passed in 1992, came into force on April 24, 1993. It was meant to provide constitutional sanction to establish "democracy at the grassroots level as it is at the state level or national level". 54 per cent of seats are occupied by women in PRI, mostly illiterates. Since inception, the political activity of women has increased by 36.7 per cent in 2007 (Table 5.3). These women leaders have contributed to the empowerment of women in local governance and serve as good role models for young and older women in rural areas.

### 5.3 Contraceptive Use

56.3 per cent of households used contraceptives in 2005-06 - of which 48.5 per cent used modern methods, increasing to 63 per cent in $2010-2011^{3}$ (Table 5.4). 75 per cent of households have received antenatal care through at least one household visit. The percentage of married women who
know of any contraceptive method in rural and urban India is given in Table 5.5. Trends in adoption of family planning methods are given in Table. 5.6.

## Policy/Schemes:

The Medical Termination of Pregnancy Act, 1971, Constitution of India, The Pre-natal Diagnostic Techniques (Regulation and Prevention of Misuse) Act, 1994.

## 6. Opportunities and Capability

The overall literacy rate for India increased to 74 per cent in 2011. The Education Index has increased by 28.5 per cent between 1999-2000 and 2007-8, yet according to the UNESCO Global Monitoring Report, nearly one third of the world's illiterates are estimated to be in India.

### 6.1 Men's/Women's Adult Literacy Rates

The literacy rate increased by 64.8 per cent in 2001 to 74 per cent in 2011, with female literacy improving considerably by 50 per cent: from 224 million in 2001 to 334 million in 2011 (Table 6.1). Enrolment has increased for both boys and girls. The GER in the total elementary cycle I - VIII increased from 82.4 to 100.5 per cent (Table 6.2 and 6.3). The drop out rate for girls has declined more rapidly than for boys. The proportion of girls in the age group 11-14 who were out of school has also declined from 11.2 per cent in 2005 to 5.9 per cent in 2010. The NSSO shows that the rate of return to university and higher education is very pronounced (R NSSO and IHDR). The Gender Parity Index is given in Table 6.4.

Table 6.1 Literacy rate in 1951-2011 census yr (\%)

### 6.2 Net Primary, Secondary and Tertiary Enrolments

The Global Gender Report presents the following data for India: female to male literacy ratio of 0.68; enrolment in primary education ratio of 0.96 ; enrolment in secondary education ratio of 0.79 and enrolment in tertiary education ratio 0.70 . Female school life expectancy from primary to secondary (in years) is 9 and for males it is 10 .

The GER-WB gross enrolment ratio as a percentage of the relevant age group for 1991 and 2009 for primary for males is $105 / 115$ and for females is $80 / 111$. For the secondary level it is $47 / 64$ and $27 / 56$ respectively, and at the tertiary level it is $8 / 16$ and $4 / 11$.

### 6.3 Availability of on-the-Job, Staff, Specialized Training for Women and Men

The Women's Vocational Training Programme in the Ministry of Labour, launched in 1974, aims to increase the social development and economic growth of women through vocational/skill training. A separate Women's Cell was formed for the purpose which has developed into the Women's Occupational Training Directorate. This Directorate is responsible for designing and pursuing long term policies related to women's vocational training in the country. The National/Regional Vocational Training Institutes for Women are the only exclusively female Institutes that provide facilities for structured, long-term regular advanced skill and post-advanced training. A network of Institutes under both central and state governments has been set up to stimulate employment opportunities among women of various socioeconomic levels and age groups. Training facilities are also being offered by the Directorate General of Employment and Training (E\&T) at one National and ten Regional Vocational Training Institutes (NVTI / RVTI) for Women. At the national level, 73,048 participants have been trained since inception.

Number of women who were trained under the Women's Vocational Training Programme 2000-2010

| $2001-02$ | $2002-03$ | $2003-04$ | $2004-05$ | $2005-06$ | $2006-07$ | $2007-08$ | $2008-09$ | $2009-10$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 26925 | 32927 | 37376 | 43336 | 49275 | 55460 | 62684 | 67246 | 73048 |

Under the state sectors of allocation in the category of trade apprenticeship training, according to the 2009-10 Annual Report only 4 per cent of women were trained among the special category of people trained, while 24 per cent of those in the categories of graduates, technicians and vocational training were female. The breakdown consists of 25 per cent graduates, 14 per cent technicians and 41 per cent technicians as vocational options. The employment status of graduates is not listed. This forms a very small share and is not proportional to the need.

Improving training and skill development has to be a critical strategy to ensure increased numbers of entrants into the labour force. In order to meet these challenges, the National Policy on Skill Development was established in February 2009. One of the objectives of the policy is to create opportunities for all to acquire skills throughout life, especially for youth, women and disadvantaged groups. This is part of the National Skill Development Mission towards a coordinated action plan to train 500 million skilled persons by 2022. A National Skill Development Corporation has been set up to take forward the Mission. One of its functions is to develop appropriate and practical solutions and strategies to address various concerns (regional imbalances; socio-economic rural-urban and gender divides; dearth of quality teachers; and incentives for the private sector to develop skills) to be adopted by both arms - the union and state governments as well as the National Skill Development Corporation - and also develop a system of institutionalising measures to this end.

The Ministry of Women and Child Development also established a Support to Training and Employment Programme for Women (STEP). The STEP Programme aims to increase the selfreliance and autonomy of women by enhancing their productivity and enabling them to take up income generation activities. It provides training f to poor and assetless women or upgrading of skills in the traditional sectors, i.e. agriculture, animal husbandry, dairying, fisheries, handlooms, handicrafts, khadi and village industries sericulture, social forestry and wasteland development. The objectives include: to mobilise women in small viable groups and make facilities available through training and access to credit; to provide training for upgrading of skills; to enable groups of women to take up employment and/or income generation programmes which provide backward and forward linkages; to provide support services to further improve the training and employment conditions of women. The target group covered under the STEP Programme includes marginalised, assetless rural women and the urban poor.

## Policy/Schemes:

Enabling policies/programmes: The Right of Children to Free and Compulsory Education Act 2010, Sarva Shiksha Abhiyan, National Programme for Education of Girls at Elementary Level and the Kasturba Gandhi Balika Vidyalayas; Rashtirya Madhyyamik Shiksha Abhiyan, Girls Hostel Scheme and ICT at Schools, Mid Day Meal Scheme, Mahila Samakya. The National Literacy Mission set up in 1988 with an aim to achieve 75 per cent literacy by 2007 and the $11^{\text {th }}$ Five Year Plan for literacy to 80 per cent, Saakshar Bharat launched in September 2009 to create a literate society for neo-literates of 15 years and older, Scheme of Vocationalisation of Education +2 Level, Adult Education and Skill

Development Scheme, INSPIRE, SHE, CURIE, Schemes for Promotion of Higher Education for SC/ST/Minorities/OBC, Post Graduate Scholarships for Students belonging to SC/ST/Minorities/OBC, Post Doctoral Fellowship for Women, Mahila Samakhya : Education for Women's Equality.

## 7. Enabling Policy Environment

Her Excellency, the President of India, Shrimati Pratibha Devisingh Patil ${ }^{13}$, showed her strong support of women and their potential to bring about change in society. She pointed out that to bring about gender quality, it is necessary to focus on educating and empowering women.

The principle of gender equality is enshrined in the Indian Constitution ${ }^{9}$ in its Preamble, Fundamental Rights, Fundamental Duties and Directive principles. Constitution of India not only grants equality to women, but also empowers the State to adopt measures of positive discrimination in favour of women. Some of the Articles 14, 15, 15(3), 16, 39(a), 39(b), 39(c) 42, 46, 47, $243 \mathrm{D}(3 \& 4)$ of the Constitution are of specific importance in this regard is given below.

## Constitution of India Guarantees

- Equality Before Law for Women (Article 14)
- The State not to discriminate against any citizen on grounds only of religion, race, caste, sex, place of birth or any of them [Article 15 (I)]
- The State to make any special provision in favour of women and children [Article 15 (3)]
- Equality of opportunity for all citizens in matters relating to employment or appointment to any office under the State (Article 16)
- The State to direct its policy towards securing for men and women equally the right to an adequate means of livelihood [Article 39 (a)]; and equal pay for equal work for both men and women [Article 39 (d)]
- To promote justice, on a basis of equal opportunity and to provide free legal aid by suitable legislation or scheme or in any other way to ensure that opportunities for securing justice are not denied to any citizen by reason of economic or other disabilities [Article 39A)
- The State to make provision for securing just and humane conditions of work and for maternity relief (Article 42)
- The State to promote with special care the educational and economic interests of the weaker sections of the people and to protect them from social injustice and all forms of exploitation (Article 46)
- The State to raise the level of nutrition and the standard of living of its people and the improvement of Public Health (Article 47)
- To promote harmony and the spirit of common brotherhood amongst all the people of India and to renounce practices derogatory to the dignity of women [Article 51(A) (e)]
- Not less than one-third (including the number of seats reserved for women belonging to the scheduled castes and the scheduled tribes) of the total number of seats to be filled by direct election in every panchayat to be reserved for women and such seats to be allotted by rotation to different constituencies in a panchayat [Article 243 D (3)]
- Not less than one-third of the total number of offices of chairpersons in the panchayats
- at each level to be reserved for women [Article 243 D (4)]
- Not less than one-third (including the number of seats reserved for women belonging to the scheduled castes and the scheduled tribes) of the total number of seats to be filled by direct election in every municipality to be reserved for women and such seats to be allotted by rotation to different constituencies in a municipality [Article 243 T (3)]
- Reservation of offices of chairpersons in municipalities for the scheduled castes, the scheduled tribes and women in such manner as the legislature of a State may by law provide [Article 243 T (4)]
Source: India, Ministry of Statistics and Programme Implementation, Central Statistical Organisation (2002). Women and Men in India 2001. New Delhi. p. v-vi. Statistics on Women in India 2010, National Institute of Public Cooperation and Child

Development, New Delhi

Within the framework of a democratic polity, laws, development policies, plans and programmes aim at women's advancement. India has ratified international instruments such as the Convention on Elimination of All Forms of Discrimination against Women (CEDAW) in 1993. India has also ratified four of the eight ILO Labour conventions, i.e. numbers 29,100,105 and 11 (see below).

## International instruments

- Mexico Plan of Action, 1975
- International Covenant on Civil and Political Rights, 1966, ratified in 1979
- Nairobi Forward Looking Strategies, 1985 called for recognition of women's unpaid work.
- Beijing Declaration as well as Platform for Action, 1995
- International Convention on the Elimination of all forms of racial discrimination, 1966, ratified 1968
- The World Summit for Social Development, Denmark, 1995
- Convention on the Elimination of All Forms of Discrimination against Women, 1979, ratified in 1993
- Convention on the Rights of the Child, 1989, ratified in 1989
- Convention against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment 1984, ratified in 1997
- Protocol to Prevent, Suppress and Punish Trafficking in Persons, Especially Women and Children, supplementing the United Nations Convention, 2000 - ratified in 2002

Source: http://wcd.nic.in

Various forms of legislation have also been enacted, some which have a direct relevance to women's issues, and some which are reviewed periodically with amendments made to safeguard the interests of women (Annex 1) ${ }^{10}$. In 1992 the National Commission for Women ${ }^{11}$ was set up to study and monitor all matters relating to the constitutional and legal safeguards provided for women and to review existing legislation, suggesting amendments wherever necessary. The National Policy for the Empowerment of Women 2001 was brought in by the Department of Women and Children under the Ministry of Human Resources Development.

#### Abstract

National Policy for the Empowerment of Women, 2001 Box 1 The goal of this Policy is to bring about the advancement, development and empowerment of women. The Policy will be widely disseminated so as to encourage active participation of all stakeholders for achieving its goals. Specifically, the objectives of this Policy include: To bring gender justice and to make dejure into de facto equality; Advancement, development and empowerment of women in all spheres of life; Creation of a more responsive judicial and legal system sensitive to women's needs; Women's equality in power sharing and active participation in decision-making; Mainstreaming a gender perspective in the development process; Comprehensive economic and social empowerment of women; Formation of relevant institutional mechanisms and strengthening the

existing ones; Partnership with community based organizations; Implementation of international obligations/ commitments and co-operation at the international, regional and sub-regional levels.
Source: http://wcd.nic.in

A National Mission for Empowerment of Women was also launched on $8^{\text {th }}$ March 2010 to monitor effective implementation of different programmes and ensure that benefits accrue to women.

## The National Mission for Empowerment of Women

The National Mission for Empowerment of Women (NMEW) was launched by the Government of India on International Women's Day in 2010 with the aim to strengthen overall processes that promote all-round development of women. It has the mandate to strengthen the inter-sector convergence; facilitate the process of coordinating all the women's welfare and socio-economic development programmes across ministries and departments. The Mission aims to provide a single window service for all programmes run by the Government for Women under aegis of various Central Ministries. The Focus Areas of the Mission include achieving gender equality, gender justice and holistic development of women through inter-sectoral convergence of programmes relating to women, forging synergy between various stakeholders and creating an enabling environment conducive to social change. Access to health, drinking water, sanitation and hygiene facilities for women; coverage of all girls especially those belonging to vulnerable groups in schools from primary to class 12; higher and professional education for girls/women; skill development, micro credit, vocational training, entrepreneurship, SHG development; gender sensitization and dissemination of information; taking steps to prevent crime against women and taking steps for a safe environment for women are also targetted.

Source: http://wcd.nic.in/ http://nmew.gov.in/

The other major enabler is the establishment of quotas for women in local self government. The 73rd Constitutional Amendment Acts ${ }^{12}$ passed in 1992 by Parliament ensure one-third of total seats be reserved for women in all elected offices in local bodies, whether in rural or urban areas. Apart from this, the Five Year Plans have had perspectives built in to promote the advancement of women (Box 5). The budget outlay, 4 cr in the first Plan (1951-56), has increased to 13,780 in the $10^{\text {th }}$ Plan ${ }^{10}$. Gender Budget cells have been established in 56 ministries ${ }^{1}$. Apart from these the Science Policy of India specifically states that it will promote the empowerment of women in all science and technology activities and ensure their full and equal participation. The $11^{\text {th }}$ Five Year Plan of S\&T clearly spells out specific intervention areas which will help women in science and science for women.

The recommendations are divided into three categories as follows. Special provisions and programmes to encourage study and practice of science and engineering by women, which has components of residential science schools in rural areas and counselling for career opportunities in science; establishment of women universities which should offer SET courses; preference given to
female faculty members; re-entry options for those who have taken a break in their career. The second major area is to take steps to reduce the stress on women scientists and students and facilitate study and practice of science by women, flexible options, crèche and age relaxation, freedom of spouses to work in the same institution, and inclusion of women on selection boards. The third area proposed is for special programmes for women scientists to aid their re-location which may be needed when they get married.

Source: report of The Steering Committee on Science and Technology for Eleventh Five Year Plan (2007-12)

There are very specific science and technology programmes for socio-economic development as wel as science and technology application programmes to promote the development and delivery of appropriate technologies, in which women are not visualised as end users but partners in the process. The National Science and Technology Entrepreneurship Development programme aims to promote entrepreneurship inclusive of women ${ }^{13}$.

Various ministries and departments have initiated special programmes for women which will be dealt in the specific sections.

Five Year Plans and Focus Areas

| First Five Year Plan (1951-56) | Mainly welfare oriented as far as women's issues were concerned. The Central Social Welfare Board (CSWB) undertook a number of welfare measures through the voluntary sector. The programmes for women were implemented through the National Extension Service Programmes through Community Development Blocks. |
| :---: | :---: |
| Second Five <br> Year Plan <br> (1956-61) | Efforts were geared to organise "Mahila mandals" (Women's Plan groups) at grassroots levels to ensure better implementation of welfare schemes. |
| Third, Fourth, Fifth (1961-80) | High priority accorded to women's education. Measures to improve maternal and child health services. Supplementary Plans for feeding of children, nursing and expectant mothers were also introduced. |
| Sixth Five <br> Year Plan <br> (1980-85) | A landmark moment in women's development. The Plan (1980-85) adopted a multidisciplinary approach with a three-pronged thrust on health, education and employment of women. |
| Seventh Five <br> Year <br> (1985-90) | Development programmes for women were continued, with the objective of raising their economic and social status and bringing them into the mainstream of national development. A very significant step was to identify and promote "beneficiary-oriented programmes" which extended direct benefits to women. |
| Eighth Five <br> Year (1992-97) | Attempted to ensure that the benefits of development for different sectors did not bypass women. Special programmes were implemented to complement the general development programmes. The flow of benefits to women in the three core sectors of education, health and employment was monitored vigilantly. Women were enabled to function as equal partners and participants in the developmental process with |

|  |  | representation in the membership of local bodies. This approach of the Eighth Plan <br> marks a definite shift from 'development' to empowerment' of women. |
| :--- | ---: | :--- |
| Ninth Five <br> Year (1992- <br> $97)$ | The Ninth Five Year Plan envisaged a) Empowerment of women and socially <br> disadvantaged groups such as scheduled castes, scheduled tribes and other <br> backward classes and minorities as agents of socio-economic change and <br> development; b) Promoting and developing people's participatory institutions such as <br> Panchayati Raj institutions, cooperatives and self-help groups; c) Strengthening <br> efforts to build self-reliance; d) The convergence of services from different sectors; e) |  |
| A women's component plan at the Central and State levels. |  |  |

[^7]Part 2 Knowledge Society Outcomes: Indicators of Women's Participation in the Knowledge Society

## 8. Women in knowledge society decision-making

### 8.1 Share of Women as Legislators, Senior Officials and Managers

The NSSO Survey captures the category of shares of women as legislators, senior officials and managers under the occupation status category. Data for the survey year 2009-10 are given in Table 8.1.

About 86 per cent of workers in rural areas are engaged in three occupation divisions, i.e., 'skilled agricultural and fishery workers', 'elementary occupations' and 'craft and related trades workers'. Among rural male workers, nearly 38 per cent are 'skilled agricultural and fishery workers' and another 35 per cent are in 'elementary occupations', while 10 per cent are 'craft and related trades workers'. The occupational structure of the rural female workforce is similar to that of the male workforce: nearly 47 per cent are 'skilled agricultural and fishery workers' and another 39 per cent have 'elementary occupations', while 7 per cent are 'craft and related trades workers'. In urban areas, among male workers, the share of 'craft and related trades workers' is the highest (19 per cent) followed by that of 'elementary occupations' (17 per cent) and 'service workers and shop \& market sales workers' (16 per cent). Among female workers in urban areas, the share of 'elementary occupations' is the highest ( 26 per cent) followed by that of 'craft and related trades workers' (19 per cent). The occupations 'professionals', 'technicians and associate professionals' and 'service workers and shop \& market sales workers' each account for a 10 per cent share of the female workers.

Further details in certain sectors such as the Civil Service - which forms the administrative core group working closely with legislators on policy and implementation - are provided in Table 8.2.

Table 8.1 Distribution of workers by status of occupation/10000 2009-2010

| Occupation | Male | Female | Total | Female to total <br> percentage |
| :--- | ---: | ---: | ---: | :--- |
| Legislators, Senior officials and managers | 633 | 263 | 896 | 29.35 |

### 8.2 Share of Businesses with 35 per cent or More Women in Decision-Making Positions

 Women in Boards study by Governance Metrics International in their assessment of 54 companies found average per cent of women on boards as 4.1. ${ }^{\text {R }}$According to one study (R), only 26.1 per cent of the listed companies (392 of 1,500 firms) have a woman on their board. Out of the 278 directors on the BSE Sensex (Bombay Stock Exchange) there are only 10 women. Compared to global counterparts corporate India is below average. Over 77 per cent of the 200 largest companies in the world, as ranked by Fortune, had at least one women director on their board as of 2006. Compared to this in only 36 per cent of Indian companies do women hold senior management positions. According to a survey by international executive research firm EMA Partners International, around 11 per cent of Indian companies have women CEOs, while in the case of the US Fortune 500 list, women CEOs account for three per cent of the total. Sectoral analysis shows that in India over half of women CEOs (54 per cent) hail from the banking and financial services sector, followed by media and life sciences (11 per cent) each. A call has been made by Confederation of Indian Industry (CII) to increase the presence of women on corporate boards by at least 33 per cent. ${ }^{R}$

### 8.2 Share of Women in Science Decision Making Bodies: Government/University/Research

## Councils and Committees and Grant Bodies

Data on this are very meagre. Data for key research Institutions in India are given in Table 8.3.

## 9. Women in the knowledge economy

### 9.1 Share of Women in Professional and Technical Positions

As indicated in earlier the demography advantage for India with a share of youth population increasing, there is an increasing demand for jobs, which is equally true for women as indicated in Table 9.1. Shares of women in administrative and managerial positions is shown in Table 8.1. The percentage of female teachers in primary education is 44 per cent, female teachers in secondary education 34 per cent and in tertiary education it is 40 per cent (WEF-GGR 2011). The percentage of female teachers is given in Table 9.2 for various levels of education.

9.2 Employment by Economic Activity (Occupation and Status) in Agriculture, Industry and

## Services in Knowledge Society Areas

Female workers show a higher dependence on the agricultural sector for work: nearly 79 per cent were engaged in agricultural sector activities while the secondary and tertiary sectors include 13 per cent and 8 per cent of female workers, respectively. In urban areas the share of the tertiary sector is dominant followed by the secondary sector, while the agricultural sector engages only a small proportion of total workers - both male and female. It is seen that in urban areas, nearly 59 per cent of
male workers and 53 per cent of female workers are engaged in the tertiary sector. The secondary sector employs nearly 35 per cent of male and 33 per cent of female workers. The share of the urban workforce in agriculture is nearly 6 per cent male and 14 per cent female workers, as seen in Tables 9.2, 9.3 and 9.4 .

Note: Figures are based on Employment Market Information (EMI) Programme
a. Figures for years 1991 to 95 are provisional based on Quarterly Employment Review and separate figures for females are not available.

### 9.3 Women with High-Level Computer Skills and Shares of Women among Information

## Technology Workers

A review of reports and papers suggests that women comprise a significant percentage of software programmers in India, with ranges between 24-26 per cent or more at the entry level with a gradual decline at higher levels. The leaky pipe syndrome happens here too.

### 9.4 Number of Women-run Entrepreneurs in Sector Value Chain

No data found.

### 9.5 Women's Early Stage Entrepreneurship Activity

According to the Micro, Small and Medium Enterprises Ministry website, the Third All India Census of Small Scale Industries conducted in 2001-02 (and subsequent estimates) found that only 10.11 per cent of micro and small enterprises in India are owned by women, while 9.46 per cent of MSE enterprises are managed by women. In 2006-07, the estimate was about 12.99 lakh women-managed enterprises. This number could vary due to the fragmented nature of the data, as very few women entrepreneurs are members of any formal associations.

## 10. Women in S\&T and Innovation Systems

### 10.1 Shares of Women Studying Science and Engineering at Tertiary Level

The percentage of girls moving into tertiary levels has been increasing over the years and is reflected in Table 10.1. Enrolment of girls in various disciplines is shown in Table 10.2 and Table 10.3. Total enrolment in 2009-10 is 41.6 per cent women students, with the highest representation in arts at 45.66 per cent; science - 19.98; and commerce - 15.91. The number of colleges for women has also increased significantly over the years to 3,432 - a 55 per cent increase compared to the $10^{\text {th }}$ Five Year Plan (Table 10. 4).

Table 10.1 Enrolment and number of girls in higher education

| Year | Total <br> (Boys and Girls) | Girls only | \% Girls |
| :--- | ---: | ---: | :---: |
| $2000-01$ | 8399443 | 3306410 | 39.4 |

10.2 Shares of women scientists and engineers; level of employment; type of employment As of April 2005, there were 61,050 women employed in R\&D, which works out to 15.6 per cent of the labourforce employed in the country. Out of this 19,707 were performing R\&D activities which works out to be 12.7 per cent of the total personnel performing R\&D activities (R\&D Statistics 2007-08).

Two national reports on the status of women in science (R) have also pointed out that disaggregated data are very meagre. One of the policy recommendations to all institutions was to put this profile on websites as part of gender audits. Tables 10.6-10.8 provide data on the levels of employment in key S\&T institutions at the national level and composition in the science academies.

### 10.3 Share of Women Researchers

Female researchers as a percentage of total researchers in 2005: 14.8 per cent, 2000: 12 per cent (UNESCO Institute for Statistics - Women in Science Aug 2010).

### 10.4 Comparative Rates and Trends of Publication

While disaggregated data are not available as part of the national data set, some research indicates trends over the the past decade:

## Research output of high quality from Indian woman scientists over the past decade

|  | Publications in journals with $\mathbf{\geq 5}$ from India (Jan 1994- <br> Apr 2004) | Men | Women |
| :---: | :---: | :---: | :---: |
| Total Number | 669 | 572 | 97 |
| Proportion (\%) | 100 | 85.5 | 14.5 |

Source: Women in life sciences, Biotech News, Vol IV, No 5 Oct 2009, Department of Biotechnology, Ministry of Government of India

### 10.5 Gender Trends in Brain Drain in Highly Skilled Fields

No disaggregated data on this is available at the National Level. According to the Global Competitive Report India is classified under the stage one category with a rank of 56/142 for the year 2011-2012 with a score of 4.30.

### 10.4 Number of Women-run Entrepreneurs in Sector Value Chains

No specific data for number of women run enterprises in a sector value chain. Examples of this exist in the rural areas as part of the informal sector, such as the milk value chain, garments, etc. This
could be a great area for rural entrepreneurs, especially in the area of post harvest value chains etc. Little data is available on this.

### 10.5 Women's Early Stage Entrepreneurship Activity

According to the MSME Ministry website, the Third All India Census of Small Scale Industries conducted in 2001-02 (and subsequent estimates made), found that only 10.11 per cent of the Micro and Small Enterprises in India are owned by women, while 9.46 per cent of the MSE enterprises are managed by women. In 2006-07, their estimated number was about 12.99 lakh women managed enterprises. This number could vary due to the fragmented database on women managed enterprise, as very few women entrepreneurs are members of any formal associations.

The Global Entrepreneurship Monitor 2010 Global Report classifies innovativeness under the factor driven category

## Women and lifelong learning

The Common Service Centre (CSC) programme is establishing 1 lakh CSCs in villages to promote village level entrepreneurial activities (VLE), as a delivery point to provide public and private services to rural citizens. 90,000 have been established under the Natil e-governance plan for IT-literacy for women. Women are actively involved in many of these Centres. Some of the Village Knowledge Centres also function as CSCs and act as a point for promoting functional literacy for women and men. ICT is being used innovatively at the grassroots, so that the rural areas have become a hotbed for the development of IT applications to meet the needs of villagers. With increasing feminisation of agriculture and with extension services not up to the mark, these centres have become a hub of activities to address the gaps in extension services. There are many innovative models which address the local specific needs of the farm households and rural women. They also provide capacity building programmes for accessing technologies, the right kind of knowledge, and marketing platforms. While ICT is only a tool, the way it is put to use brings out the innovation. It is here that the CSCs and Village Knowledge Centres can play a vital role. While there are no systematic data on the number of women who use them or act as managers of the Centres, a number of case studies reveal that they do play an important role. Some of the examples include the VKC/VRC of the M.S. Swaminthan Research Foundation, and the Self Employed Women's Association (SEWA) model.

Some of the examples on how mobiles can support India's poor women cited by Osama Manzar ${ }^{1}$ include the Barefoot College at Ajmer in Rajasthan which has been using mobiles along with community radio to serve 25,000 women from 200 villages in training, livelihood programmes and health services. 50 per cent of the participating women have their own mobiles which they are using to improve their livelihoods. Members of SEWA in Gujarat use voice-based and symbol-based SMS systems to provide their members with access to market information. Uninor partnered with the

[^11]Department of Telecommunications to launch the Sanchar Shakti voice-based service for women which delivers information, expert advice and news alerts on health, education, self employment and finance, in cooperation with self help groups (SHGs), NGOs, and educational institutions. The Commonwealth of Learning and the Vidiyal SHG created 500 audio messages on a variety of topics that were sent to women on a daily basis to promote lifelong learning, with the specific aim of supporting their businesses. In Jeend in Haryana, Kisan Sanchar has been serving a women farmers' group through mobile for agriculture extension services with both a voice- and SMS-based platform. In Konark in Orissa, Young India has achieved a 100 per cent attendance rate of girls in Gop Block schools through the integrated use of mobile and community radio.
